

Grinding Media

With over 25 years of experience in the milling industry, Eiger Torrance sales and service staff can advise you on the best grinding media to meet your specific requirements. We stock a large range of media ranging from glass through to yttria or cerium stabilised zirconia.

Available in sizes from 0.1mm, these high density ceramic beads offer the user higher productivity and narrow particle size distribution for difficult to grind materials

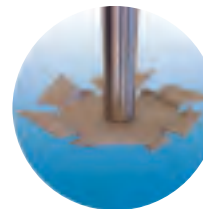

Dispersion Blades

The dispersion blade fitted to your HSD or large batch mixer is probably the most important choice you will make regarding the efficiency of the mixing/dispersing. Our service department stock a large range of dispersion blades in sizes from 25mm to 600mm, of which just a few are shown below.

Torrance P2 high flow / high shear blade for low to high viscosity materials. A very versatile blade giving significant improvements in dispersion and homogenisation over standard HSD blades.

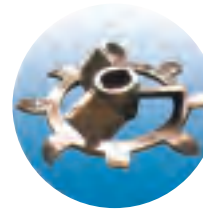

Torrance P7 high shear dispersion blade for low to medium viscosity materials.

High shear "cowles" type dispersion blade for low to medium viscosity paints etc.

Custom blade design such as this axial flow combi place for car body fillers and similar high build products.

Service Repair And Refurbishment

With over 50 years of combined experience in the Surface Coatings industry, our Service Department can draw on a vast amount of knowledge regarding your Mixing and Milling requirements.

As well as our own range of equipment, we can supply, service, repair and refurbish most types of mills and mixers no matter what part of the world they were manufactured in.

In addition, we stock a range of pre-owned machines to suit most requirements please contact our Service Department or check our website for details.
